Foreword

Tamil Nadu Agricultural University is the first to introduce Information Technology in the field of Agriculture. The application of Information Technology in day to day activities becomes part and parcel of our routine. The application of Information Technology in the biological streams like Agriculture, Medicine and Veterinary Science has been given impetus and many of the Universities in India have made Information Technology, a compulsory subject even at under graduate level, mainly to make the life sciences dynamic and application oriented.

In this context, teaching the students with this resource material is very vital. The available resource materials support the students for self learning. The content is very simple, interesting, self explanatory and easy to follow and comprehend the subject thoroughly.

The book covers the diverse areas ranging from artificial intelligence, artificial neural networks, decision support system, expert system, geographic information system, information system related to agriculture, genetic algorithm, programming language with backend tool to develop softwares.

Under this context, the book “**Agro-Informatics**” written by Mrs. G. Vanitha, Assistant Professor of Computer Science, and Mrs. M. Kalpana, Assistant Professor of Computer Science working in the Department of Physical Sciences & Information Technology are highly appropriate, timely and relevant.

On the whole the book is well written and provides many new insights. The authors deserve appreciation for bringing out a valuable book encompassing all the essential issues and subjects of Aggroinformatics. The authors certainly have to be complemented for their effort.

Preface

Agroinformatics allows us to cope with the information deluge in the agriculture sector in increasingly efficient and effective ways. Agroinformatics is basically a multidisciplinary subject which covers a wide spectrum of Agricultural issues and it generally draws the concepts and methods of Computer Science. It brings the application in agriculture with innovative ideas, techniques and scientific knowledge to expand the horizons of the Computer Science.

The book contains the details about the information technology applied to management and analysis of agricultural data. The book covers the diverse areas ranging from artificial intelligence, artificial neural networks, decision support system, expert system, geographic information system, information system related to agriculture, genetic algorithm, programming language with backend tool to develop softwares. The book contains fifteen chapters that highlight and discuss the various dimensions of Agroinformatics.

It is hoped that the book will provide the basic and fundamental knowledge of understanding the concepts of Bioinformatics. This book is prepared, taking into consideration the changing needs of the undergraduate curricula of various universities involved in offering courses on Agroinformatics. The book will also be a guide for the researchers. The book would also provide the required computer knowledge to the students of State Agricultural Universities and other ICAR Institutions to sharpen their understanding of Agroinformatics.

G.Vanitha
M.Kalpana

Acknowledgement

We take this opportunity to thank our Vice Chancellor, Dr. P.Murugesu Boopathi, Tamil Nadu Agricultural University, Coimbatore for having provided the necessary working atmosphere, conducive environment and permission to bring out this valuable edition.

We would like to express our heartiest thanks to Dr. S. Santhana Bosu, Dean (Engg) for his continuous encouragement and well wishes.

We wish to express our regards to Dr. R. Palanisamy, Professor & Head, Department of Physical Sciences & Information Technology for his cooperation to bring this publication in time.

We would like to thank all those individuals who have directly or indirectly contributed their time and energy to bring this edition successfully.

We thank New India Publishing Agency (New Delhi) for their efforts in bringing out this book in record time.

We invite suggestions and critical comments from the reader for further improvement and refinement of this book.

**G.Vanitha
M.Kalpna**

Contents

<i>Foreword</i>	<i>v</i>
<i>Preface</i>	<i>vii</i>
<i>Acknowledgement</i>	<i>ix</i>
1. Introduction to Agroinformatics	1-3
• What is Agroinformatics? • Agroinformatics • Definitions • Objectives of Agroinformatics • Information Systems Terminology • Agroinformatics Tools	
2. Agriculture Information System	5-8
• Agriculture Information Systems • Major Trends • Agriculture Information System • Importance • Internet Based Agriculture Information System • Support Provided by Agriculture Information System • AGRIS/CARIS • AGROVOC • Agriculture Research Information System (ARIS) • Agriculture Research Information Center	
3. Farm Management System	9-10
• Introduction • The Concept of a Farm Management System	
4. Management Information System	11-14
• Introduction • Characteristics of Management Information System • Management Information Systems Advantage • Outputs of a Management Information System	

5. Geographic Information System	15-32
<ul style="list-style-type: none">• Defining GIS • Fundamentals of GIS • Mapping Concepts, Features and Properties • Geographical Data Sets • Spatial & Non-spatial Data • Attribute Data • Remote Sensing in Agriculture • Remote Sensing in Farm • Principles of Remote Sensing • How Does Remote Sensing Work? • Global Positioning System • Components of a GPS • GPS Positioning Types • GPS Applications • Remote Sensing and GIS • Use of GPS in Agriculture • General Packet Radio Service (GPRS) Network • The GPRS Network • Benefits	
6. Artificial Intelligence	33-42
<ul style="list-style-type: none">• What is Intelligence? • What is Artificial Intelligence? • Branches of AI • Natural-Language • Natural Language Processing • Natural Language Recognition • Simple Natural Language Grammar • Intelligent Technologies in Agriculture • Intelligent Animal Houses • Agricultural Robots	
7. Artificial Neural Networks	43-55
<ul style="list-style-type: none">• What is a Neural Network? • How does an Artificial Neural Network (ANN) work? • Characteristics of Neural Networks • Architectures of Artificial Neural Networks • Learning Process • Classification of Learning Algorithms • Artificial Neural Networks in Agriculture - Intelligent Agent • Classes of Intelligent Agents • Characteristic of Intelligent Agents	
8. Expert Systems	57-70
<ul style="list-style-type: none">• What is Meant by the Term Expert? • Building Blocks of Expert Systems • Designing Expert Systems in Problem Solving • Applications of Expert System • An Expert System for Decision Problem • Advantages of Expert System • Cases of Expert Systems in Agriculture	
9. Decision Support System (DSS)	71-81
<ul style="list-style-type: none">• Introduction • Types of DSS • Scope of DSS • Benefits of DSS • Common Uses of Decision Support Systems • Decision Support System for Farm Management	
10. Genetic Algorithms	83-95
<ul style="list-style-type: none">• Introduction • Features of Genetic Algorithm • Steps in Executing the Genetic Algorithm • Applications of Genetic Algorithm • Artificial Ant Problem	

11. Programming Language - Visual Basic	97-129
<ul style="list-style-type: none"> • A Brief Description of Visual Basic • Types of Application in VB • Creating the Project • Steps in Building a Visual Basic Application • Visual Basic Data Types • Managing Variables • Constants • String Functions • Operators in Visual Basic • Controlling Program Flow • Looping • The InputBox() Function • Methods • Procedure • Control Array • MsgBoxes • Data Access • Data Access Objects (DAO) • Microsoft Jet Database Engine • Remote Data Objects • Microsoft ActiveX Data Objects • Data Control • Object Linking and Embedding (OLE) 	
12. Database Management System	131-166
<ul style="list-style-type: none"> • Database • Data Model • Database Software • DBMS Facility • Architecture for a DBMS • Data Modeling • Components of a Data Model • RDBMS (Relational Database Management System) • Client/Server Model of Computing • Entity Relationship Diagram (E-R diagram) • Entity Relationship Diagram Notations - Front-end and Back-end • Codd's Rules • SQL - Structured Query Language • Data Definition Language (DDL) • Data Manipulation Language (DML) • DCL • Data Control Language • Transaction Control (TCL) 	
13. Agricultural Databases, Technical Report and Conference Reports	167-190
<ul style="list-style-type: none"> • Agriculture Database Concepts and Importance • The Orientation of Topic Selection for the Construction of the Agricultural Database • The Principle of Specialization in the Construction of the Agricultural Database • Top Quality Principle of Building Databases • Agriculture Database Types • Agriculture Libraries • Agriculture Journals • Technical Reports • Conference Papers • E-Books in Agriculture 	
14. Web Portal	191-195
<ul style="list-style-type: none"> • Web Portal • Types of Portals 	
15. Introduction to Bioinformatics	197-241
<ul style="list-style-type: none"> • Definition of Bioinformatics • History of Bioinformatics • Structural Bioinformatics • New Branch of Bioinformatics • Bioinformatics - Application in Agriculture • Analyzing Protein Sequence • Pairwise Alignment • Multiple Alignment • Blast - A Sequence Alignment Tool • EMBL • SWISS-PROT • Rice Genome Project • Software for Bio-informatics • Major Categories of Bioinformatics Software • Internet Sites For Bioinformatics 	

Agro-Informatics
